

ABSTRACT:

A hand-operated circular saw having blade cutting ~~dap~~
depth the adjustment device includes a ~~hallow~~ hollow interior
tubular body having a hand grasp portion, a head portion, a
5 motor disposed in the head portion to operate a threaded axis
protrude from a threaded circular protrusion on a ~~a~~ an outer side
~~of the~~ of head portion, an upper plate secured to the outer side
including a circular hole engaged with the circular ~~protrusion~~
protrusions, a pair of pivotal tubes and a pair of horizontal
10 arc ~~protrusion~~ protrusions on the top, a guard plate, a pad ring,
an internally thread tube and a saw blade sequentially secured
to the axis, a lower plate connected to a pair of cylinder rods
inside the pivotal ~~tube~~ tubes, a pair of quickly operated ~~bolt~~
bolts in the top of the pivotal tubes for adjusting the vertical
15 positions of the lower plate and the saw blade, and a cutting
depth adjustment device. ~~a bent lateral slidably engaged within~~
~~the horizontal arc protrusion through a pair of elongate cylinder rod~~
~~for adjusting the cutting depth of the saw blade and a U-shaped~~
~~handle pivoted to the head portion of the tubular body.~~
